Consumer Confidence	Report (CCR)
West Tallahatchie, (1	tility Association Inc.
Public Water Supply	/ Name
680013 680019	
List PWS ID #s for all Community Water	
The Federal Safe Drinking Water Act (SDWA) requires each Common Consumer Confidence Report (CCR) to its customers each year. Do system, this CCR must be mailed or delivered to the customers, published customers upon request. Make sure you follow the proper procedure email a copy of the CCR and Certification to MSDH. Please check	nunity public water system to develop and distribute a sepending on the population served by the public watened in a newspaper of local circulation, or provided to the swhen distributing the CCR. You must mail, fax of all boxes that apply.
Customers were informed of availability of CCR by: (Attack	ch copy of publication, water bill or other)
☐ Advertisement in local paper (attach co	ppy of advertisement)
☐ On water bills (attach copy of bill)	
☐ Email message (MUST Email the mess ☑ Other Handmail	sage to the address below)
Date(s) customers were informed: 6 28 2017, /	
CCR was distributed by U.S. Postal Service or other d methods used //cwd Mail Door to D	
Date Mailed/Distributed: / /	
CCR was distributed by Email (MUST Email MSDH a cop	y) Date Emailed: / /
☐ As a URL (Provide URL	
☐ As an attachment	
☐ As text within the body of the email me	ssage
CCR was published in local newspaper. (Attach copy of pub	lished CCR or proof of publication)
Name of Newspaper:	
Date Published:/	<u> </u>
CCR was posted in public places. (Attach list of locations)	
CCR was posted on a publicly accessible internet site at the	following address (DIRECT URL REQUIRED):

ERTIFICATION ereby certify that the Consumer Confidence Report (CCR) has been d form and manner identified above and that I used distribution meth ormation included in this CCR is true and correct and is consistent with ter system officials by the Mississippi State Department of Health, Bureau Olamber 1998 1998 1998	ods allowed by the SDWA. I further certify that the the water quality monitoring data provided to the public of Public Water Supply
me/Title (President, Mayor, Owner, etc.)	Sept 26, 2017 Date
Submission options (Select one	method ONLY)
Mail: (U.S. Postal Service) MSDH, Bureau of Public Water Supply P.O. Box 1700	Fax: (601) 576 - 7800
Jackson, MS 39215	Email: water.reports@msdh.ms.gov

CCR Deadline to MSDH & Customers by July 1, 2017!

2016 Annual Drinking Water Quality Reporting 31 PM IO: 52 West Tallahatchie Utilities Association PWS#: 0680013 & 0680019 July 2017

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Winona Tallahatchie and Meridian Upper Wilcox Aquifers.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the West Tallahatchie Utilities Association have received lower susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Eddie Meeks at 662.647.4032. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Wednesday after the 10th at 5:00 PM at the West Tallahatchie Utility Office located at 19 Garrett Road, Tutwiler, MS 38963.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2016. In cases where monitoring wasn't required in 2016, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

^{*} Most recent sample. No sample required for 2016.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

Significant Deficiencies - System 0680013

During a sanitary survey conducted on 11/19/2013, the Mississippi State Department of Health cited the following significant deficiency(s).

Lack of redundant mechanical components where treatment is required

Corrective actions: MSDH is currently working with this system to return them to compliance since the expiration of the compliance deadline. We anticipate the system being returned to compliance by 6/30/2017.

Significant Deficiencies - System 0680019

During a sanitary survey conducted on 1/13/2016, the Mississippi State Department of Health cited the following significant deficiency(s).

Inadequate application of treatment chemicals and techniques (primary MCLs)

Inadequate internal cleaning/maintenance of storage tanks

Failure to meet water supply demands (overloaded by serving greater than 100% capacity)

Inadequate security measures

Corrective actions: This system has entered into a Bilateral Compliance Agreement with MSDH to correct these deficiencies by 12/30/2017.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The West Tallahatchie Utilities Association works around the clock to provide top quality water to every tap. We are in the process of an upgrade, elevated tank painted and cleaned, new lines added to HWY 49 subdivision to add customers. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
